

Thermal Shelves & Carving Stations

Thermal Shelves

Add a completely customized look to your decor with a hot food holding module that allows you to combine your own surface material with a Halo Heat, base-heated recessed thermal shelf for a perfect counter top blend. The heat-adjustable module provides optimal temperature maintenance for serving or carving and can be built into any new or existing service line. Shelves are 24 inches wide and are available in 24-, 30-, 48-, or 72-inch lengths.

Heated Carving Stations

Heated Carving Stations keep product hot while maximizing visual appeal. Carving stations can stand alone or can be placed directly on top of a Halo Heat Cook & Hold oven or Heated Holding Cabinet.

While many carving stations rely solely on old-fashioned heat lamps, Alto-Shaam's Heated Carving Station keeps food warm from below and above. Soft, gentle Halo Heat radiates from the carving shelf surface, while ambient surface lamps effectively maintain temperature from above. Optional clear glass breath guards also are available.

Thermal Shelves

HFM-24
Hot Food Module
24-inch length
